AI-Assisted Respiratory Sound Examination Report

Report ID: 6a83516a643939f75b098264
Date and Time: 2026-08-17 18:22:34 UTC
Model: CNN + BiLSTM
Model Version: 1.0

User Information

Name: Report User
Email: report@lungsenseai.local

Examination Summary

Predicted respiratory sound: Wheeze
Confidence: 77.3%

Model confidence reflects the model's prediction probability and should not be interpreted as medical certainty.

Class	Probability
Normal	21.0%
Crackle	0.5%
Wheeze	77.3%
Crackle + Wheeze	1.1%

Interpretation

The model detected an acoustic pattern classified as Wheeze. This is an acoustic classification result and does not determine the underlying medical cause.

Wellness Guidance

Sleep: Aim for a consistent sleep schedule and adequate rest.

Hydration: Maintain adequate fluid intake according to individual needs.

Physical Activity: Maintain appropriate regular physical activity if medically suitable.

Environment: Reduce exposure to smoke, dust, and known respiratory irritants.

Air Quality: Avoid prolonged exposure to heavily polluted environments when possible.

Nutrition: Maintain a balanced diet rich in essential nutrients.

Stress Management: Use appropriate stress-management practices.

Suggested Daily Routine

Morning:

- Wake up consistently at a regular time
- Hydrate with a glass of water
- Light movement or stretching
- Consume a balanced breakfast

Day:

- Incorporate regular movement into your schedule
- Maintain adequate hydration throughout the day
- Consume balanced meals
- Avoid smoking and known respiratory irritants

Evening:

- Engage in light, relaxing activity
- Practice relaxation techniques
- Reduce excessive screen exposure before sleep

Night:

- Maintain a consistent sleep schedule
- Ensure adequate sleep duration in a comfortable environment

Professional Guidance

Consider consulting a qualified healthcare professional if respiratory symptoms persist, worsen, or interfere with normal activities.
